

## Web-Stack Hacker

Elastica, a top tier VC funded stealth-mode startup based in Silicon Valley, is looking for Web-stack hackers. It's a rare grounds-up opportunity for the selected few who like to apply their hacking prowess on the development of cloud services for the next generation Big Data Security Platform. You will be working with a very talented team located in the middle of trendy Santana Row in Silicon Valley.

It's the opportunity to learn and make your contributions in solving the next big challenge of Cloud Security.

### Responsibilities:

- Design and implementation of modern and user-centric web and mobile applications.
- Collaborate with UX/ UI team and product teams to implement modern enterprise applications
- Proven ability to hack impressive software projects

### Requirements:

- Ability and strong passion to learn and implement state-of-the-art web technologies
- Hands-on experience for full webstack development using modern platforms like Angular.js or Knockout.js is a big plus
- Hands-on expertise with d3.js and dc.js is a big plus
- Java Script, JS based frameworks or Angular experience
- Deep knowledge of one or more UI frameworks , JQuery, Ajax and Theming/Visual Design experience (CSS/customize layout in themes).
- Experience with Python/Django based back-end technologies and NoSQL databases
- BS or MS degree in Computer Science from a good school

### What we offer:

- An excellent compensation package, targeted for brilliant minds
- An open and friendly work environment.
- Excellent location in the middle of trendy and casual Santana Row
- Opportunity to work on cutting edge technologies
- Rare opportunity to create your own career path
- Opportunity to contribute in solving the next big problem of Cloud Security
